

Energi 360 is not your typical calibration service. This annual program is a complete preventative maintenance service that calibrates the Energi Torque Management system (TD Flange) and inspects the essential components of your Anchor Drive.

Energi 360 is an industry-first service that ensures your Anchor Drive is ready every time you hit the job site. Your Dinamic Oil Anchor Drive is designed to get work **DONE**, not be worked **ON**.

## INDUSTRY LEADING MAINTENANCE AND SUPPORT

### STEP 1

Energi equipped Anchor Drive is returned for calibration and service.

### STEP 2

The Anchor Drive is received, dismantled, and components are inspected.

### STEP 3

The Energi TD Flange is isolated, tested and calibrated.

### STEP 4

All components are reassembled and tested for functionality.

### STEP 5

Calibrated Anchor Drive passes final inspection and returned to customer.

### WHAT ARE THE BENEFITS OF ENERGI 360?

Energi 360 allows Dinamic Oil to increase the level of service to our Anchor Drive customers. Energi 360 not only calibrates the integrated TD Flange but provides thorough preventative maintenance to the Anchor Drive.

Energi 360 enables you to spend your time operating your Anchor Drive, not servicing it. It's necessary that each Energi-equipped Anchor Drive be serviced and calibrated every twelve months. This service interval ensures the torque management system is operating within the designed parameters.

### CALIBRATION SERVICE

We calibrate the highly accurate sensors embedded in the TD Flange using our ETDS test bench. Our test bench allows us to isolate and qualify the TD Flange.

The TD Flange is calibrated using NTEP certified load cells to measure applied torque. A calibration certificate is provided with each Anchor Drive.

### PROTECT YOUR PERFORMANCE

In addition to full calibration, Energi 360+ upgrades the preventive maintenance service level to inspect and replace the essential components of the Anchor Drive. **Minimize downtime and maintain top performance and convenience by choosing Energi 360+.**

## MAXIMUM PERFORMANCE AND UPTIME

The Energi 360 program ensures your Anchor Drive is at peak performance each time you take it to the job site. **This industry-leading service allows you to protect your investment and confidently select jobs that require calibrated torque monitoring.**

## TWO DIFFERENT LEVELS OF SERVICE

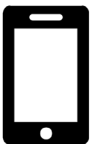

Dinamic Oil offers two levels of Energi 360 service. Calibration is included in both levels of service. Upgrading to Energi 360+ provides an in-depth inspection of the entire Anchor Drive, replacement of critical internal components (if required), new paint and graphics package. **Energi 360+ returns your Anchor Drive to like new condition!**

### ENERGI 360

- TD Flange Calibration
- Seal Replacement (TD Flange section)
- Bail Housing Inspection
- New Gear Oil
- Functionality Test
- Calibration Certificate

### ENERGI 360+

- TD Flange Calibration
- Bail Housing Inspection
- New Gear Oil
- Complete Seal Replacement (Entire Gearbox)
- In-depth Gear and Bearing Inspection
- Hydraulic Motor/Manifold/Valve Inspection
- Decal Replacement (Graphic and Safety)
- New Paint
- Functionality Test
- Inspection Report
- Calibration Certificate

After the calibration and maintenance service is complete, the Anchor Drive is returned with a new calibration certificate. The Energi mobile app will automatically update to reflect the new calibration operating period.

## NEXT-GENERATION SERVICE AND TECHNOLOGY

The innovative Energi torque management system paired with Energi 360 sets new standards for capability and service for the helical pile installation industry.

Dinamic Oil allows you focus on what you do best and boost your bottom-line results.
